Evidence summary

Actual screenshots of Replit development and runtime use. No usage records or sponsor receipts are fabricated.

Project identity

SDC2026-domain2-nailong (2), in the team Workspace. Replit account displayed in the source captures: Lingyuxuan469.

Observed use

The Replit Console shows a running Python HTTP server on port 3000 and HTTP requests for Nexus application assets. The in-editor preview shows the Nexus workspace.

Premium access

A user-supplied account screenshot shows the Replit Core plan. Payment details have been removed. SDC-provided access was confirmed by the team leader; this screenshot alone does not establish who funded the subscription.

Scope and limits

This evidence supports development and a running frontend preview. It does not establish a public Replit production deployment, functioning AI generation, or production data security. The separate current judging prototype is hosted on Sites.

Capture provenance

Console and in-editor preview: captured directly by the assistant on 25 October 2026, Malaysia time. Workspace and Core plan: supplied by the user on the same date. Screens represent their captured state and may differ from later builds.

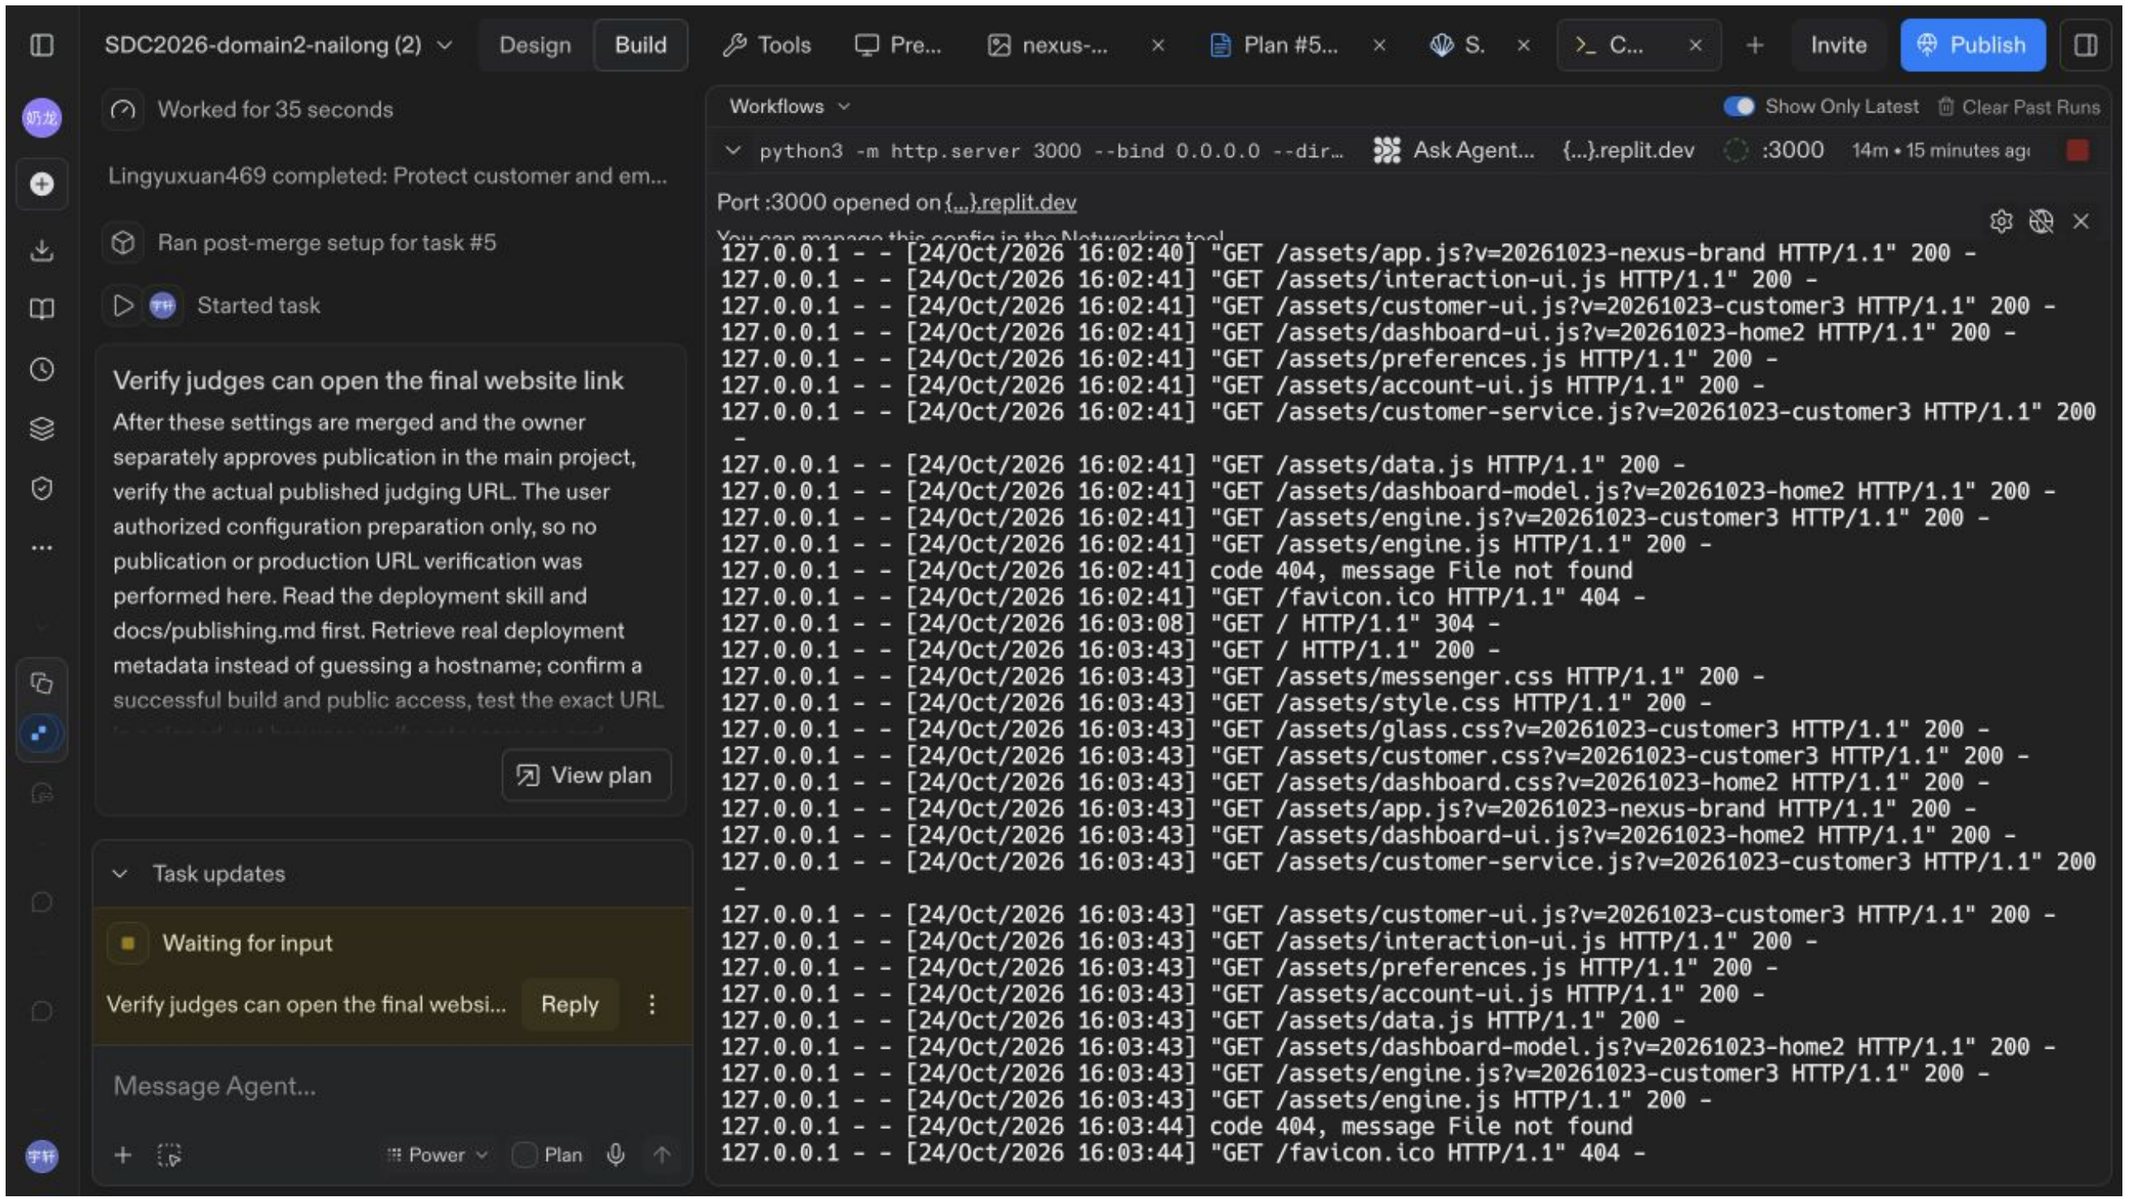

Replit development project

https://replit.com/t/nai-long/repls/SDC2026-domain2-nailong-2

Judging prototype: https://nexus-nailong-2026.d7ystszcjf.chatgpt.site/

01 / Actual Console output

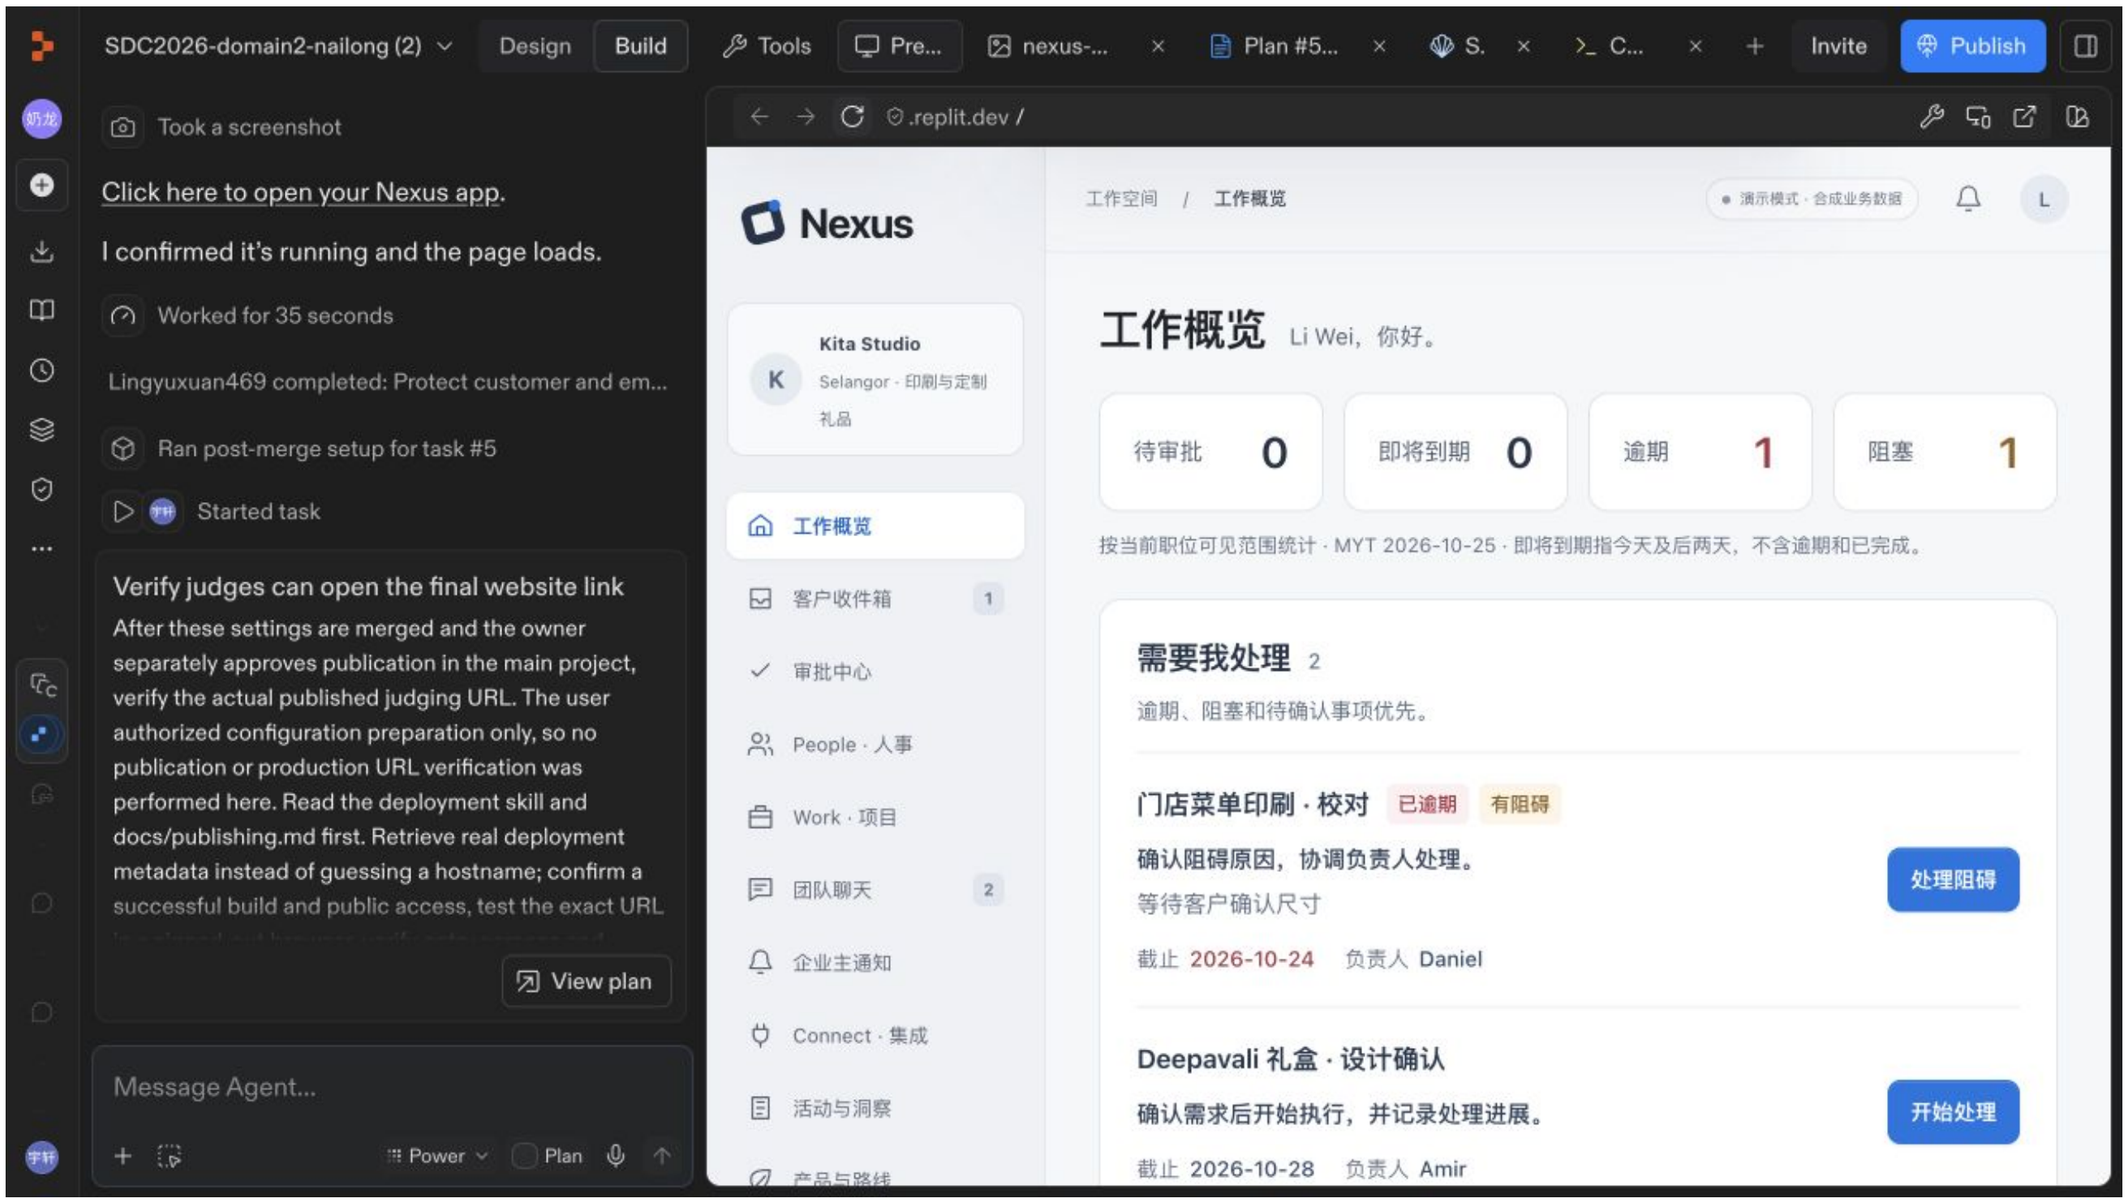

Running command and HTTP request logs visible inside the Replit project. This is frontend preview evidence.

The Console shows python3 -m http.server 3000 and successful HTTP 200 / 304 requests for Nexus pages and assets. A development preview is not a production deployment.

02 / Nexus inside Replit Preview

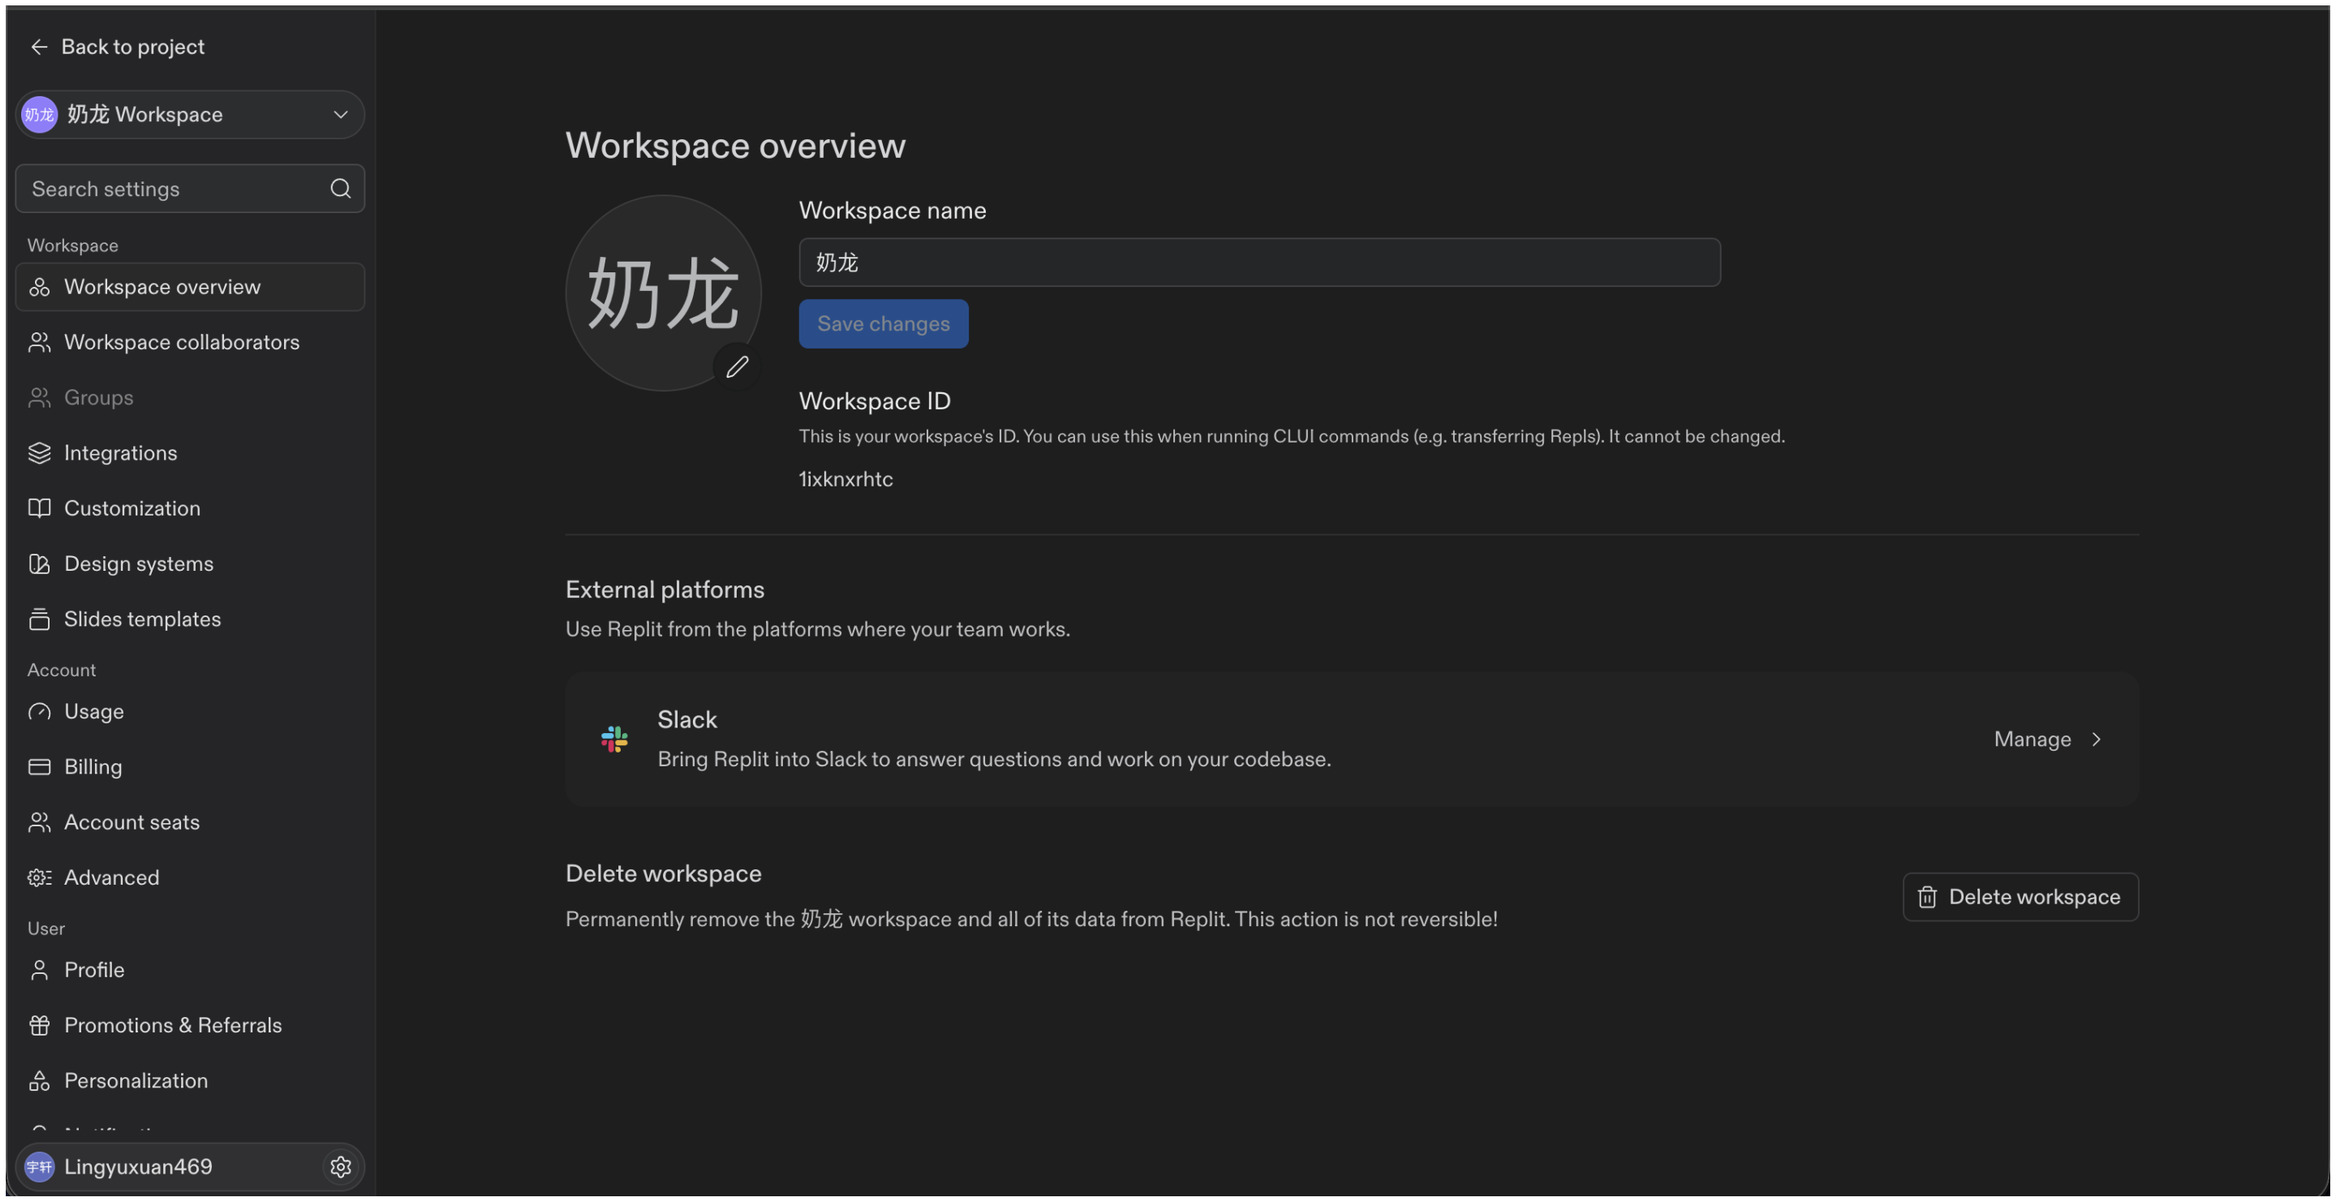

Actual Nexus workspace displayed inside the same Replit project; synthetic business records are visible.

This capture documents the running preview at the time of collection. It is not a claim that every external integration is connected or that this is the latest build.

03 / Team Workspace identity

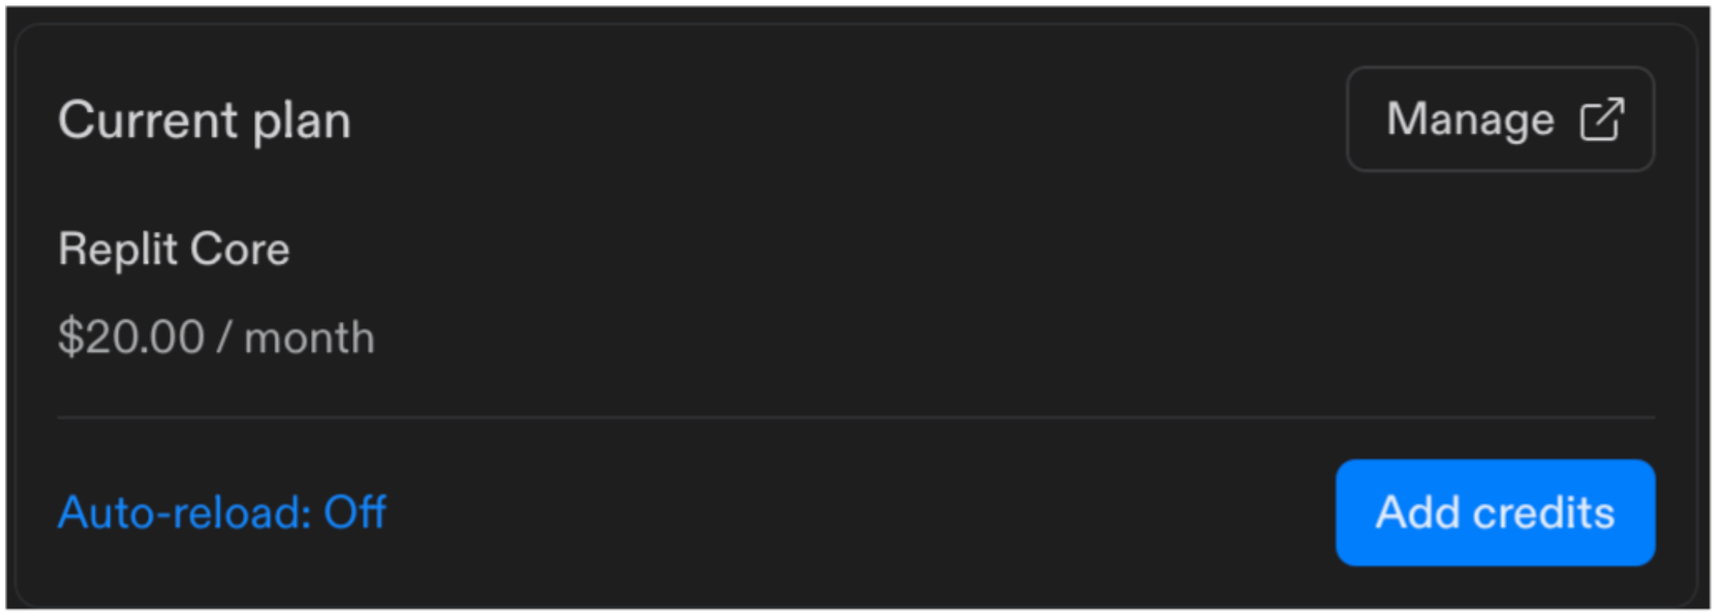

User-supplied Replit Workspace overview. A member email list is deliberately excluded from public evidence.

The Workspace overview links the project context to the team. It does not by itself establish a paid plan, sponsor eligibility, or proof of runtime use.

04 / Core plan - payment details removed

Only the relevant plan panel is retained from the supplied account screenshot. Original billing details are not embedded.

What this establishes: the supplied account view displays the Replit Core plan.

What remains team-reported: SDC supplied the premium access. This panel does not independently prove the sponsor source, the subscription redemption, or the team Workspace entitlement.

Privacy handling: the payment panel, renewal information and unrelated screen areas were removed through PDF image redaction before the allowed region was rendered for this public document.
